IN THE CLAIMS

Please amend the claims as follows:

Please cancel claims 1-20 without prejudice or disclaimer.

1-33. (Cancelled)

34. (New) A lead assembly comprising:

a lead body extending from a proximal end to a distal end, the lead body including a plurality of conductors disposed therein, wherein at least one of the plurality of conductors includes a braided conductor and at least one of the plurality of conductors includes a coiled conductor;

an outer coating of composite insulative material coated directly on at least one conductor;

at least one electrode electrically coupled with at least one of the plurality of conductors; and

wherein the plurality of conductors includes at least a first conductor disposed within a second conductor, and at least one coating is coated between the first conductor and the second conductor.

- 35. (New) The lead assembly of claim 34, wherein the second conductor includes the braided conductor.
- 36. (New) The lead assembly of claim 34, wherein the first conductor includes the coiled conductor.
- 37. (New) The lead assembly as recited in claim 34, wherein the composite coating comprises a first coating and a second coating coated over the first coating.

- 38. (New) The lead assembly of claim 34, wherein the first conductor includes the braided conductor, and the first conductor is sized and shaped to rotate relative to the second conductor.
- 39. (New) The lead assembly of claim 38, wherein the first conductor includes an active fixation device, and rotation of the first conductor extends the active fixation device relative to the lead body.
- 40. (New) A lead assembly comprising:

a lead body extending from a proximal end to a distal end, the lead body including one or more conductors disposed therein;

an outer coating of composite insulative material coated directly on the one or more conductors;

at least one electrode electrically coupled with the one or more conductors; and wherein at least one conductor includes a braided conductor sized and shaped to rotate relative to the lead body, and the braided conductor includes an active fixation device proximate to the distal end of the lead body, and rotation of the braided conductor extends the active fixation device relative to the lead body.

- 41. (New) The lead assembly of claim 40, wherein the active fixation device includes a helical coil.
- 42. (New) The lead assembly of claim 40, wherein the braided conductor includes a second electrode, and rotation of the braided conductor extends the second electrode relative to the lead body.
- 43. (New) The lead assembly of claim 40, wherein one or more conductors includes at least a first conductor coaxial and non-coradial with a second conductor, and at least one coating is coated between the first conductor and the second conductor.

44. (New) The lead assembly of claim 43, wherein the at least one coating is a composite insulative coating.

- 45. (New) The lead assembly of claim 43, wherein the first conductor includes the braided conductor disposed within the second conductor.
- 46. (New) The lead assembly of claim 43, wherein at least one of the first conductor and the second conductor includes a coiled conductor.

47. (New) A method comprising:

providing a plurality of conductors including at least a first conductor and a second conductor, wherein at least one of the plurality of conductors includes a braided conductor and at least one of the plurality of conductors includes a coiled conductor;

coupling at least one electrode with one or more of the plurality of conductors; disposing the first conductor within the second conductor;

coating a first composite insulative material between at least the first conductor and the second conductor; and

coating a second composite insulative material on at least an outer surface of the second conductor.

- 48. (New) The method of claim 47, wherein disposing the first conductor within the second conductor includes disposing the first conductor including the coiled conductor within the second conductor including the braided conductor.
- 49. (New) The method of claim 47, wherein at least one of coating the first composite insulative material and coating the second composite insulative material includes coating a first layer and coating a second layer over the first layer.

SUPPLEMENTAL PRELIMINARY AMENDMENT

Serial Number: 10/717,978

Filing Date: November 20, 2003

Title: LEAD HAVING COMPOSITE TUBING

Page 5 Docket No: 279.357US2

50. (New) The method of claim 47, wherein coating the first composite insulative material

between at least the first conductor and the second conductor includes coating the first composite

insulative material on the first conductor.

51. (New) The method of claim 47, wherein coating the first composite insulative material

between at least the first conductor and the second conductor includes coating the first composite

insulative material on an inner surface of the second conductor.

52. (New) The method of claim 47, wherein disposing the first conductor within the second

conductor includes rotatably coupling the first conductor with the second conductor, and the first

conductor is sized and shaped to rotate relative to the second conductor.

53. (New) The method of claim 52, further comprising rotating the first conductor, wherein

the first conductor includes an active fixation device, and rotating the first conductor extends the

active fixation device relative to the second conductor.
